

COMPANY PROFILE

Neo Technology

Sweden

www.neotechnology.com

Neo Technology is the world leader in commercial and open source graph database systems. It is a Swedish enterprise software company with offices in Malmö, Linköping and Páskallavik.

Neo is a graph database, which means that it excels at storing graph-like data (networks) but can handle all types of information. For many applications, Neo offers performance improvements on the order of 1000x or more compared to relational DBs.

A graph is a mathematical term for data structured in a network. A graph database like Neo uses simple graph building blocks (nodes, relationships and key-value properties) to model information. This allows software developers to work with a flexible, dynamic and adaptive data structure rather than forcing their domain data into strict and static tables.
