Visiarc was founded in 2002 as an independent software vendor, ISV, and a pioneer in the emerging enterprise mobility space. Shortly after incorporation we released the world's first mobile enterprise solution for on demand over the air access and visualization of live precision graphics (i.e. vector graphics CAD drawings, maps, spare parts manuals etc) directly to mobile devices in the palms of the workforce in the field on any device, anywhere, anytime. Today, this vision remains the same but the scope is wider, i.e. a generic platform, and we are still on the cutting edge of Mobile Internet, a position we intend to maintain.

Visiarc was recently recognized as one of Sweden's hottest technology start-ups by the largest weekly technology magazine NyTeknik and the business magazine Affärsvärlden in Sweden.
